Layers are associated with categories, as they are in
the current tool.

Categories are associated with "Paradigms" selected
in the top right.

Categories may be associated with multiple
Paradigms so that their layers can persist when the
Paradigm is changed

Layers may be associated with multiple Categories
so in case one Category is only partially relevant to
a Paradigm

Switching Paradigms would not hide any Paradigm
specific layers*

* NOTE: This is optional - we could limit Layer
visibility to the Paradigms that their Category is
associated with.
